

## Complete Wet Wipe System

# Introducing the New Diversey Disposable Wiping System

**FREE**  
CHARGING  
BUCKET & LID!  
With Purchase of  
Dry Wipes.

### Create your own wet wipes!

#### Step 1:

Remove lid from charging bucket. The charging bucket and lid are designed specifically to fit Diversey dry wipes so that you can create pre-wetted wipes that are easily dispensed from the bucket.

#### Step 2:

Remove dry wipes from box and stack them into the charging bucket. The dry wipes are made of high quality fibers that allow for easy pick-up and removal of dirt, dust and other soils. They can be used in spray and wipe applications or used as a wet wipe solution when combined with Diversey's charging bucket and Oxivir® Tb disinfectant cleaner. Unlike dry wipe systems that are intended to be used within 24 hours of adding disinfectant, **this system's shelf life is extended 28 days when Oxivir® Tb is added.**

#### Step 3:

\*Pour Oxivir® Tb into the charging bucket and replace lid. Oxivir® Tb is a one-step cleaner disinfectant powered by AHP technology. It is effective against key pathogens, TB, MRSA, Norovirus and VRE. **It also kills SARS-CoV-2 (COVID-19), HBV, HCV and HIV in one minute, Tuberculocidal in five minutes and Fungicidal in ten minutes.**

\*See pre-wetting instructions for additional details, including the quantity of chemical to use.

# Diversey Disposable Wiping System

## Pre-wetting Instructions

### How to Use Diversey Cleaners and Disinfectants with Disposable Dry Wipes:

Both ready-to-use (RTU) and concentrated cleaners and disinfectants that have been properly diluted, may be used with Disposable Dry Wipes. Use of Diversey cleaners and disinfectants with Disposable Dry Wipes provides customers with the labor savings and convenience of using disposable wipes to clean and disinfect hard nonporous surfaces.

Following are directions on how to use Diversey cleaners and disinfectants with Disposable Dry Wipes:

1. Open the wipe canister / bucket by pulling the large perimeter lid (not by the hinged cap).
2. Calculate the amount of liquid to add to the dry wipes using the estimate of .004 oz per square inch of wipe (estimate 2 quarts for 125 sheets that are 10.5x12). The amount of liquid can vary based upon the absorption of the wipe.
3. If using a concentrated chemical, ensure the cleaner / disinfectant is properly diluted.
4. Add ½ of the calculated liquid cleaner / disinfectant to the bottom of the empty container that is being used for the wipes prior to adding any of the dry wipes to the container.
5. Place the stack / donut of dry wipes into the container being used. Pour the remaining ½ of the liquid over the dry wipes.
6. Allow 5-10 minutes for the solution to be absorbed into the wipes.
7. Label the container so it clear what cleaner / disinfectant is in use. Include the date the wipes were wetted. Generally, the shelf life is 24 hours from when the wipes are pre-wet. If you are using an Improved or Accelerated Hydrogen Peroxide® product with Diversey EasyWipes™ or Dry Wipes, the shelf life is 28 days (when pre-wetted onsite).
8. Refer to the original product label for directions for use and surface contact times.
9. Close the container after each use to prevent loss of cleaning/disinfectant solution and to protect the solution from contamination.

**Please contact Diversey Customer Technical Service  
if there are any questions at 1-800-558-2332, Option 5.**
